Certified

B Corporation

This ecosheet discloses the environmental impact of our product. We calculated the impact of our products from a lifecycle perspective and making it a key tool to guide us in minimizing our footprint.
Sustainability Roadmap
Environmental Footprint

4,97 kg CO_2e

15,60 km

We have calculated the environmental footprint of this product in terms of the Global Warming Potential, expressed in CO_2e. To make this number easier to understand, we have also created the "average car equivalent"*.

Circularity Program

Give your product a second chance!

If you have any products you no longer need, send them back to us. We will refurbish them wherever possible, giving them well-deserved longer lives.

Reach out to any of our representatives or write to circularityprogram@dataflex-int.com if you are interested in extending the lifecycle of your products too!

Recycling

Reduced environmental impact through proper recycling

1,30 kg CO_2e

If the product in the end is unrepairable, with proper recycling, we can still help recover a portion of environmental footprint through the recycling process.

Offsetting

As a final measure, we offset both direct and indirect environmental impacts in our business operations (A - C below) with our partner. Our commitment is to continuously reduce our impact, minimizing the need for compensation in the long run.

Environmental footprint in detail

In the following section we demonstrate the materials used in the product, specifying the percentage of recycled content, material recyclability, and the total impact of the product throughout all stages of its lifecycle, measured in Global Warming Potential (GWP).

Product & Packaging

Material	Weight (g)	% of total weight	% of recylced content	Recyclable (Yes/No)	GWP (kg CO₂e)
Cold-rolled steel	265,0	26%	0	Y	0,62
45# steel	323,0	32%	0	Y	1,32
Stainless steel	31,0	3%	0	Y	0,24
ADC-12	216,0	21%	0	Y	1,96
POM	14,0	1%	0	Y	0,07
Rubber	46,0	5%	0	Y	0,13
Cardboard box	94,0	9%	0	Y	0,09
Label	6,0	1%	0	Y	0,01
Paper	12,0	1%	0	Y	0,01
Total Product	1007,0	100%	0%	100%	4,46

Production (A1 - A3)

Production of the product, transport to Dataflex and processes at Dataflex make up the total production phase.

	Product - A1	Transport to Dataflex - A2	Dataflex processes - A3	Production A1 - A3
GWP (kg CO₂e)	4,46	0,22	0,00	4,68

Product life (A - C)

The rest of the lifespan of a Dataflex product.

	Production A1 - A3	Transport to client - A4	Installation (materials) - A5	Use - B	Waste processing / disposal - C	Total lifespan A - C (no recycling)
GWP (kg CO₂e)	4,68	0,05	0,00	0,00	0,24	4,97

Recycling (A - D)

With proper recycling we can drastically reduce the environmental footprint of a product.

	Total lifespan A - C (no recycling)	Recycling - D	Total lifespan A - D (with recycling)
GWP (kg CO₂e)	4,97	-1,30	3,67

Contact

The calculations to create this ecosheet were performed in cooperation with Ecochain BV

www.ecochain.com

This Ecosheet is a brief synopsis of LCA information disclosed by Dataflex. Full Environmental Product Declarations (EPD's) are available for selected products. The data provided in this sheet is collected in collaboration with our suppliers and calculated with Ecochain. We continuously work to improve the accuracy and reliability of our data and processes as we strive to enhance our transparency and sustainability efforts.
* 1 kg CO₂e is equal to 3.14 km with the average car (source: Ecoinvent 3.2). ** Recyclability of the product: sum of the weight of recyclable material / total product weight.
